Cyclic peptide(s) that modulate cadherin-mediated cell adhesion - used to improve drug delivery through skin, to the brain etc., for treatment of cancer, angiogenesis etc., and to improve grafting of foreign tissue or neurite

Claim 8; Page 97; 133pp; English.

This is a cyclisised peptide capable of modulating cadherin-mediated cell adhesion. Cadherin-expressing cells can be detected from their reaction with the antibody that binds the peptides of the invention. These mediated by E., N., P. or R-cadherins (or other cadherins that include the amino acids HAV recognition sequence), specifically where these are twyressed by epithelial, endothelial, neural or tumour cells or ymphocytes. The peptides which inhibit cell adhesion are used to improve close stream), to tumours (particularly ovarian or bladder tumours or malanoma) and to the brain. They are also used to treat cancer (carcinoma, leukaemia or melanoma), inhibit metastasis and also inhibit malanoma, leukaemia or melanoma), inhibit metastasis and also inhibit congiagenesis in The peptides that stimulate adhesion are used to improve wound healing to promote adherence of foreign tissues (skin grafts or organ transplants), and to improve adherence to tissue culture surfaces and bloreactors. Other uses of the peptides are to induce apoptosis in cadherin-expressing cells, increase or decrease neurite outgrowth, to treat spinal cord injuries and de-myelising neurological diseases (specifically multiple sclerosis). They can be used for modulating the immune system (e.g. in cases of diabetes or rheumacoid arthritis) for preventing pregnancy and to increase vaso-permeability. The antibodies which bind to these peptides are also used to modulate cell adhesion and

when coupled to a drug, to target the drug to cadherin-expressing cells. Diagnostic agents may also be delivered using the peptides in a skin patch, particularly where the agent generates a colour in contact with, e.g. cocanine, human immunodeficiency viral proteins, glucose or prostate specific antigen, particularly for home-testing kits. The peptides make it possible to deliver a wide range of drugs through the skin, avoiding parenteral administration, by-passing the gastro- intestinal system and

New catenin modulating agents - comprising peptides having a sequence HAV or analogues or antibodies, used for modulating cadherin-mediated Eunctions

Claim 12; Page 78; 106pp; English.

The present sequence represents a peptide which is capable of inhibiting an interaction between alpha-catenin and beta-catenin. The peptide is used in modulating agents that are used for modulating cadherin-mediated functions. They can be used for disrupting interaction between alphacatenin and beta-catenin in a cell, inhibiting cell adhesion, e.g. between epithelial cells, endothelial cells, neural cells, tumour cells and lymphocytes, for treating a demyelinating neurological disease, e.g. multiple solerosis, for reducing unwanted cellular adhesion in a mammal, for enhancing the delivery of a drug through the skin of a mammal, for enhancing the delivery of a drug through in a mammal, for treating cancer in a mammal, for inhibiting angiogenesis in a mammal, for enhancing drug delivery to the central nervous system of a mammal, for inducing apoptosis in a cadherin-expression cell, for modulating the

```
The present sequence represents a peptide which is capable of inhibiting an interaction between alpha-catenin and beta-catenin. The peptide is used in modulating agents that are used for modulating cablerin-mediated functions. They can be used for disrupting interaction between alphacatenin and beta-catenin in a cell, inhibiting cell adhesion, e.g. between eptthelial cells, endothelial cells, neural cells, tumour cells and lymphocytes, for treating a demyelinating neurological disease, e.g. multiple sclerosis, for reading unwanted cellular adhesion in a mammal, for enhancing the delivery of a drug through the skin of a mammal, for cancer in a mammal, for inhibiting angiogenesis in a mammal, for cancer in a mammal, for inhibiting angiogenesis in a mammal, for inducing apoptosis in a cadherin-expression cell, for modulating the immune system of a mammal, for preventing pregnancy in a mammal, for increasing vasopermeability in a mammal, or for inhibiting synaptic stability in a mammal. In particular they can be used for treating
                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New catenin modulating agents - comprising peptides having a sequence HAV or analogues or antibodies, used for modulating cadherin-mediated

immune system of a mammal, for preventing pregnancy in a mammal, for increasing vasopermeability in a mammal, or for inhibiting synaptic stability in a mammal. In particular they can be used for treating diabetes, rheumatoid arthritic, allergic responses, antibody-mediated graft rejection or for stimulating learning and memory
                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             agents that comprises a His-Ala-Val recognition sequence. Also provided is a method for inhibiting synaptic stability in a mammal that comprises administering to a mammal a therapeutically effective amount of a CAM agent that inhibits cadherin-mediated adhesion, where the agent comprises a cyclic peptide having a peptide ring, and where the sequence His-Ala-Val is present within the peptide ring. The cyclic peptides are cell adhesion modulating agents that inhibit cadherin-mediated adhesion. They can be used in a method for inhibiting synaptic stability in mammals. They can be used to treat diseases or other conditions characterized by undesirable cell adhesion or to facilitate drug delivery to a specific rissue or tumour. Alternatively the agents may be used to enhance cell adhesion (e.g. to supplement or replace stitches or to facilitate wound healing) or to enhance or direct neurite outgrowth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       peptide cell adhesion modulating agents, useful for modulating \epsilon stability.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SXXXXXXXXXXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention is concerned with methods of modulating the amount of free beta-catenin in the cell, and methods of stimulating the expression of genes involved in cellular differentiation, the transcription of which is under the control of beta-catenin. The peptides given in AAB27053-B27088, AAB27284-B27300 and AAB27330-B27351 can be used as modulating agents which interrupt the interaction between alpha and beta catenin, causing increased levels of the latter and stimulating the activation of beta-catenin mediated transcription. This can be used to stimulate cell differentiation, which can then be used to promote hair growth and skin exfoliation. This latter is particularly useful in the improvement of photodamaged skin and to minimise wrinkles. The modulating peptide can also be used to reduce hearing loss resulting from inner ear disorders such as hyperacusis and tinnitus
                                                                                                                                                                                                                                                                                                                                                    Stimulating beta-catenin mediated gene expression, cellular differentiation and hair growth, involves contacting cells with modulating agent capable of inhibiting interaction between alpha and beta
                                                                                                                             Beta-catenin; cadherin-mediated intercellular adhesion; cell differentiation; modulating agent; hair loss; skin exfoliation; internalisation moiety; flanking sequence; transcription; hearing loss.

of free beta-catenin in the cell, and methods of stimulating the expression of genes involved in cellular differentiation, the transcription of which is under the control of beta-catenin. The peptides given in AAB27053-B27089, AAB27284-B27300 and AAB2730-B27351 can be used as modulating agents which interrupt the interaction between alpha and beta catenin, causing increased levels of the latter and stimulating the activation of beta-catenin mediated transcription. This can be used to stimulate cell differentiation, which can then be used to promote hair aprovement of photodamaged skin and to minimise wrinkles. The modulating peptide can also be used to reduce hearing loss resulting from inner ear disorders such as hyperacusis and tinnitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Stimulating beta-catenin mediated gene expression, cellular differentiation and hair growth, involves contacting cells with modulating agent capable of inhibiting interaction between alpha and beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention is concerned with methods of modulating the amount
Beta-catenin, cadherin-mediated intercellular adhesion, cell differentiation, modulating agent, hair loss, skin exfoliation, internalisation moiety, flanking sequence, transcription, hearing loss,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Diagnosis; cancer; OB-cadherin; N-cadherin; E-cadherin; CAR; cyclic; cell adhesion recognition sequence; leukaemia; metastasis; prostate cancer; breast cancer; ovarian cancer; carcinoma.

imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting anglogenesis, enhancing development of cancer, the control mediating modulating the immune system, increasing vasopermeability, treating demyelinating the immune system, increasing vasopermeability, expressing cell on astrocytes, inhibiting angration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating neutre outgrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "Linked to residue 5 to form a cyclic peptide, N-terminal acetyl or N-terminal CH3-502 group"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to cell adhesion modulating agents that comprise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cell adhesion modulating agent used for enhancing delivery of drug to tumor comprises imidazole compounds.
                                                                                                                                                                                                                                                                                                                                                                                                            Chen Z, Michaud SD, Wang S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cadherin; cytostatic; gynecological; endometriosis; endothelial cell adhesion; angiogenesis; vasopermeability; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  degeneration. The present sequence represents a cyclic pept classical cadherin cell adhesion recognition (CAR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 34; DB 4; Length 5; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes methods which have been developed for detecting and evaluating cancer that are based on the finding that OB-cadherin are expressed by metastatic carcinomae cells, but not by highly differentiated, poorly invasive carcinomae. A method for determining the presence or absence of a cancer in a patient comprises:

(1) conteacting a biological sample from the patient with a binding agent that specifically binds to OB- or N-cadherin OR with an oligonucleotide that specifically binds to OB- or N-cadherin or that hybridises to the binding agent of polymucleotide that binds to the binding agent of polymucleotide that binds to the binding agent of polymucleotide that things to the coligonucleotide, relative to a predetermined cut-off value, and off determining the present invention can be used to determine the methods from the present invention can be used to determine the metastatic potential of a cancer. The methods may be used to detect a metastatic potential of a cancer. The method sinclude leukemia, progression of a cancer, or to evaluate the metastatic potential of a cancer. Cancers which may be evaluated using the methods include leukemia, progression of a cancer, breast cancer and ovarian cancer. Affilial represent peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                          The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                                                                                                                        Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition

The method comprises contacting a biological sample obtained from the patient with a binding agent, preferentially antibodies or cell adhesion recognition (CAR) sequences, that specifically bind to OB-cadherin or N-cadherin or an oligonucleotide that hybridises to a polynucleotide encoding OB-cadherin or N-cadherin and then detecting the amount of polypeptide that binds to the binding metastatic potential of cancer, such as prostate, ovarian or breast cancer, as well as leukaemia in a patient. It can also be employed for monitoring the progression of cancer in a patient. The inventive method cancer in a patient. The such inventive method cancer in a patient in a simple and economical manner. The sequences presented in ABUSSOSS-ABUSSOSS and ABUSOSII-ABUSOSS are OB-cadherin or N
                                                                                                                                                                                                                                                                                                         Diagnosing or evaluating metastatic potential of cancer in patient by contacting biological sample obtained from patient with specified binding agent or oligonucleotide, and detecting polypeptide that binds to the

                                                                                                                                                                                                                                                                                     The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide ring. The agent that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadhesion in a mammal, for adhesion, for reducing unwanted cellular adhesion in a mammal, for caher, for inhibiting angiogenesis, for enhancing the delivery of a drug to a tumour, for inhibiting the cartral nervous system, for enhancing wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for increasing wound healing, for enhancing migration of an N-cadherin expressing cell on astrocytes, facilitating migration of an N-cadherin expressing cell on astrocytes, for inhibiting spinal cord injuries and for treating mecular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agent is useful for treating skin disorders, acute B cell leukaemia. Excessive immune excessive immune excessive immune expensents a sadherin (CAD) cell adhesion recognition (CAR) sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cell adhesion-modulating agent; cadherin-mediated cell adhesion; cancer; angiogenesis; central nervous system; wound healing; foreign tissue adhesion; vasopermeability; demyelinating neurological disease; astrocyte; synaptic stability; neurite outgrowth; spinal cord injury; macular degeneration; metastasis; bladder; tumour; ovary; melanoma; carcinoma; leukaemia; multiple sclerosis; cytostatic; antiangiogenic; neuroprotective; ophthalmological; Cell adhesion-modulating peptidomimetic; cadherin cell adhesion recognition sequence; CAR; cyclic.

The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, classical cadherin-mediated cell adhesion, modulating classical cadherin-mediated intercellular adhesion, reducing unwanted cellular adhesion in a mammal, enhancing the delivery of a drug to a tumour in a mammal, enhancing the delivery to the central nervous system of a mammal, enhancing drug delivery to the central nervous system of a mammal, enhancing drug delivery to the central nervous system of a mammal, enhancing drug delivery to the central nervous system of a mammal, increasing vound healing in a mammal, tenhancing adhesion of foreign tissue implanted within a mammal, candulating adhesion of foreign tissue implanted within a mammal, call mammal, increasing cell on astrocytes, inhibiting synaptic stability in a mammal, modulating meutite outgrowth, treating spinal cord injuries in a mammal, modulating macular candor in a mammal. The compounds are useful for inhibiting the development of cancer, e.g. treating corp preventing cancer and/or inhibiting anglogenesis, for enhancing the cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agents are also useful in inhibiting anglogenesis, for enhancing delivery of a drug to a tumour in a mammal, for enhancing delivery of a drug to a tumour in a mammal, for enhancing delivery of a drug to a tumour in a mammal, for enhancing wound healing a mammal, for modulating the immune system of a mammal, for modulating a mammal, for modulating and energenesis (such as multiple sclerosis) in a mammal, for modulating synaptic stability in a mammal, for modulating synaptic stability in a mammal, for contains and a mammal.

Contains and a mammal and a trug to a tumour in a mammal and a mammal and a mammal and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidomimetic, comprising classical cadherin cell adhesion recognition (CAR) sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of vyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing development of cancer, inhibiting angiogenesis, enhancing delivery to the CNS, enhancing wound healing, modulating the immune system, increasing vasopermeability, exating demyelinating disease, faciliteting migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating neurite outgrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with

The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidonimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing drug delivery to the CNS, enhancing inhibiting angiogenesis, enhancing drug delivery to the CNS, enhancing treating demyelinating the immune system, increasing vasopermeability, treating demyelinating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating degeneration. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence
Cell adhesion; imidazole; peptidomimetic; cadherin; angiogenesis; CAR; cytostatic; vulnerary; immunomodulator; vasotropic; neuroprotective; cerebroprotective; muscular; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cell adhesion, imidazole, peptidomimetic, cadherin, angiogenesis, CAR, cytostatic, vulnerary, immunomodulator, vasotropic, neuroprotective,

                                                                                                                                                                                                                                                                                                        The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing claivery of a drug to a tumor, inhibiting development of cancer, inhibiting anglogenesis, enhancing drug delivery to the CMS, enhancing wound healing, modulating the immune system, increasing vasopermeability, treating demyelinating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating energing cell and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with

The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of eyello peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing drug delivery to the CNS, enhancing treating demyelinating the immune system, increasing vasoperameability, treating demyelinating diesase, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating neurite cougrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cell adhesion; imidazole; peptidomimetic; cadherin; angiogenesis; CAR; cytostatic; vulnerary; immunomodulator; vasotropic; neuroprotective; cerebroprotective; muscular; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            adhesion modulating agent used for enhancing delivery of drug to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gарв

                                                                                                                                                                                                                                      The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing drug delivery to the CNS, enhancing wound healing, modulating the immune system, increasing vasopermeability, treating demyelinating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating meurite coutgrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cell adhesion; imidazole; peptidomimetic; cadherin; angiogenesis; CAR; cytostatic; vulnerary; immunomodulator; vasotropic; neuroprotective; cerebroprotective; muscular; cyclic.

The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that compides a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing delivery to the CMS, enhancing treating angiogenesis, enhancing delivery to the CMS, enhancing creating demyelihating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating neurite outgrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "N-terminal acetyl. ```
The present invention relates to a method for modulating endothelial call adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogeneals, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                           The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing tho development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence was used to illustrate the present invention
                                                                                                                                                          Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ż
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ပ်

                                                 The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometricisis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ż

The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells as a result of surgery, injury, chapter and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "Linked to residue 1 to form a cyclic peptide, C-terminal amide"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such

The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ż
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ပံ

The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadherin-mediated intercellular adhesion, for reducing unwanted cellular adhesion in a mammal, for enhancing the delivery of a drug to a tumour, for inhibiting the central nervous system, for enhancing delivery to the central nervous system, for enhancing delivery to the central nervous system, for enhancing wound healing, for modulating the immune system of a mammal, for increasing the immune system of a mammal, for increasing assopermeability, for treating a demyelinating neurological disease, for facilitating migration of an N-cadherin expressing cell on astrocytes, continuiting synaptic stability, for modulating neurite outgrowth, for treating spinal cord injuries and for treating macular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or

leukaemia. The agent is useful for treating skin disorders, acute B cell leukaemia, excessive immune reactions involving the humoral immune system and generation of immunoglobulins and diseases associated with excessive generation of T cells. This sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the

cenhancing the delivery of a drug to a tumour, for inhibiting the development of cancer, for inhibiting angiogenesis, for enhancing drug development of cancer, for inhibiting angiogenesis, for enhancing drug calivery to the central nervous system. for enhancing wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for woodulating the immune system of a mammal, for increasing enterological disease, for facilitating migration of an N-cabharin expressing cell on astrocytes, for inhibiting synaptic stability, for modulating neurite outgrowth, for treating spinal cord injuries and for treating macular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agent is useful for treating skin disorders, acute B cell leukaemia, excessive immune reactions involving the humoral immune system and generation of immunoglobulins and diseases associated with excessive generation of Immunoglobulins and diseases associated with excessive dehesion recognition (CAR) sequence represents a cadherin (CAD) cell

The invention relates to a cell adhesion modulating agent which is a comprises the sequence HAV within a cyclic peptide ring. The agent that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadhesion in a mammal, for adhesion, for reducing unwanted cellular adhesion in a mammal, for adhesion, for reducing unwanted cellular adhesion in a mammal, for cahencing the delivery of a drug to a tumour, for inhibiting the central nervous system, for analysems of cancer, for inhibiting analysement of cancer, for inhibiting analysement of cancer, for inhibiting analysement of cancer in a mammal, for modulating the adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for increasing cell on astrocytes, cancer is a bladder tumour, overlan tumour, advanced regeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or cancer is a mammal diseases associated with excessive and generation of rells. This sequence represents a cadherin (CAD) cell cancer or adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cadherin; CAD; extracellular domain; cell adheaion; peptidomimetic; cadherin-mediated intercellular adheaion; tumour; cancer; anglogenesis; central nervous system; wound healing; vasopermeability; N-cadherin; demyelinating neurological disease; astrocyte; synaptic stability; ovary; neutice outgrowth; spinal cord injury; mecular degeneration; bladder; melanoma; carcinoma; leukaemia; skin disorder; acute B cell leukaemia; immune reaction; immunoglobulin; T cell generation; CAR; cyclic;
dimensional structure similar to three-dimensional structure of cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a cell adhesion modulating agent which is a peptidominetic having a three-dimensional structure of a cyclic peptide that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadherin-mediated intercellular adhesion, for reducing unwanted cellular adhesion in a mammal, for enhancing the delivery of a drug to a tumour. for inhibiting the development of cancer, for inhibiting angiogenesis, for enhancing delivery to the central nervous system, for enhancing wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for increasing vasopermeability, for treating a demyelinating neurological disease, for facilitating migration of an N-cadherin expressing cell on astrocycles, for inhibiting synaptic stability, for modulating meular degeneration. The cancer is a bladder tumour, ovarian tumour, malanoma, carcinoma or leukaemia, accessive immune reactions involving the humoral immune system cand generation of Immunoglobulins and diseases associated with excessive generation recognition (CAR) sequence represents a cadherin (CAD) cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cadherin, CAD, extracellular domain, cell adhesion, peptidomimetic, cadherin-mediated intercellular adhesion; tumour; cancer; angiogenesis; central nervous system; wound healing; vasopermeability; N-cadherin; demyelinating neurological disease; astrocyte; synaptic stability; ovary; neurite outgrowth; spinal cord injury; macular degeneration; bladder; melanoma; carcinoma; leukaemia; skin disorder; acute B cell leukaemia; immune reaction; immunoglobulin; T cell generation; CAR; cyclic;

The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide that comprises the sequence HAV within a cyclic peptide ring. The agent that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadherin-mediated intercellular adhesion, for reducing unwanted cellular adhesion in a mammal, for enhancing the delivery of a farug to a tumour. for inhibiting the delivery of a inhibiting angiogenesis, for enhancing drug development of cancer, inhibiting angiogenesis, for enhancing drug cellivery to the central nervous system, for enhancing wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for modulating the adhesion of foreign tissue implanted within a mammal, for containing the immune system of a mammal, for increasing vasopermeability, for treating a demyelinating neurological disease, for for inhibiting synaptic stability, for modulating neurite outgrowth, for treating spinal cord injuries and for treating macular degeneration. The cancer is a bladder tumour, newar, melanoma, carcinoma or leukaemia, excessive immune reactions involving the humoral immune system and generation of T cells. This sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ovary;

```
The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide ring:

that comprises the sequence HAV within a cyclic peptide ring:

that comprises the sequence HAV within a cyclic peptide ring:

adhesion, for reducing unwanted cellular adhesion in a mammal, for adhesion, for reducing unwanted cellular adhesion in a mammal, for cancer, for inhibiting the adhesion of cancer, for inhibiting wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for increasing

callivery to the central nervous system, for enhancing wound healing, for enhancing the adhesion of foreign tissue implanted within a mammal, for cancer in a mammal ord injuries a demyelinating neurological disease, for facilitating migration of an N-cadharin expressing cell on astrocytes, for inhibiting spinal cord injuries and for treating mcurite outgrowth, for treating spinal cord injuries and for treating mcular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia, excessive immune reactions involving the humoral immune system and generation of immunoglobulins and diseases associated with excessive and generation of calls. This sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence ceptesents a cadherin (CAD) cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel cell adhesion modulating agent for modulating cadherin-mediated intercellular adhesion, for enhancing wound healing, has threedimensional structure similar to three-dimensional structure of cyclic
melanoma; carcinoma; leukaemia; skin disorder; acute B cell leukaemia; immune reaction; immunoglobulin; T cell generation; CAR; cyclic; cell adhesion recognition sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang

The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, identifying a compound that modulates classical cadherin-mediated cell adhesion, modulating classical cadherin-mediated intercellular adhesion, cadhesion a tumour in a mammal, enhancing the delivery of a drug to a tumour in a mammal, enhancing the delivery concert in a mammal, inhibiting angiogenesis in a mammal, enhancing drug delivery to the central nervous system of a mammal, enhancing drug delivery to the central nervous system of a mammal, enhancing delivery concert in a mammal enhancing wound healing in a mammal, enhancing adenyelinating neurological disease in a mammal, cadolating an activation of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability in a mammal, modulating neurite outgrowth, treating spinal cord injuries in a mammal, modulating neurite outgrowth, treating spinal cord injuries in a mammal, modulating neurite outgrowth, treating spinal cord injuries in a mammal, modulating neurite outgrowth, configuration cancer and/or inhibiting metateasis. The cancer, e.g. treating agents are useful for inhibiting angiogenesis, for enhancing the drug to a tumour in a mammal, for enhancing delivery contral nervous system of a mammal, for enhancing adhesion of foreign tissue implanted within a configuration neural nervous system of a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for modulating phenetic guestility in a mammal, for modulating or treating spinal cord inhibiting synaptic stability in a mammal, for modulating synaptic stability in a mammal, for modulating spinal cord inhibiting synaptic stability in a mammal, for modulating spinal cord inhibiting synaptic stability in a mammal secondarial secondarial secondarial secondarial secondar demyelinating neurological disease, astrocyte, synaptic stability; neurite outgrowth, spinal cord injury; macular degeneration; metastasis; bladder; tumour; ovary; melanoma; carcinoma; leuksemia; multiple sclerosis; cytostatic; antiangiogenic; neuroprotective; ophthalmological; Cell adhesion-modulating peptidomimetic; cadherin cell adhesion recognition sequence; CAR; cyclic. New cell adhesion modulating agent, useful for treating or preventing cancer and/or inhibiting metastagis, inhibiting anglogenesis, enhancing wound healing, treating a demyelinating neurological disease or treating spinal cord injuries. Cell adhesion-modulating agent; cadherin-mediated cell adhesion; cancer; anglogenesis; central nervous system; wound healing; foreign tissue adhesion; vasopermeability; treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidomimetic, comprising classical cadherin cell adhesion recognition (CAR) sequence. or preventing cancer and/or inhibiting metastasis. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agents are also useful in inhibiting angiogenesis, for enhancing the delivery of a drug to a tumour in a mammal, for enhancing drug delivery to the central nervous system of a mammal, for enhancing wound healing in a mammal, for modulating the immune system of a mammal, for treating a dhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for treating a demyelinating neurological disease (such as multiple sclerosis) in a mammal, for inhibiting synaptic stability in a mammal, for modulating neurological disease (such as multiple sclerosis) in a remain eutgrowth, for treating spinal cord injuries in a mammal and for treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion recognition (CAR) sequence.
                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cell adhesion-modulating agent; cadherin-mediated cell adhesion; cancer; angiogenesis; central nervous system; wound healing; foreign tissue adhesion; vasopermeability; demyclinating neurological disease; astrocyte; synaptic stability; neurite outgrowth; spinal cord injury; macular degeneration; metastasis; bladder; tumour; ovary; melanoma; carcinoma; leuksemia; multiple sclerosis; cytostatic; antianglogenic; neuroprotective; ophthalmological; cell adhesion-modulating peptidomimetic; cadherin cell adhesion recognition sequence; CAR; cyclic.

                                                                                                                                                                                                                                                      treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidomimetic, comprising a classical cadherin cell adhesion recognition (CAR) sequence.
compound that modulates classical cadherin-mediated cell
                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cadherin-mediated cell adhesion-modulating peptidomimetic #74.

The invention relates to a ceri adnession-modutating agent. The invention cases to a cere and a candidated compound for the ability to modulate classical cadherin-mediated cell adhesion, identifying a compound that modulates classical cadherin-mediated cell adhesion, adhesion, modulating classical cadherin-mediated intercellular adhesion, reducing unwanted cellular adhesion in a mammal, enhancing the delivery of a drug to a tumour in a mammal, enhancing the delivery concerns and adhesion of foreign tissue implanted within a mammal, enhancing drug delivery concerns in entraing adhesion of foreign tissue implanted within a mammal, enhancing adhesion of foreign tissue implanted within a mammal, contains a demyelinating neurological disease in a mammal, concerns a mammal, treating a demyelinating neurological disease in a mammal, concernsability in a mammal, modulating vasopernseability in a mammal, modulating or inhibiting synaptic stability in a mammal, modulating or chancing cadherin-mediated cell adhesion. The cell adhesion modulating or enhancing cadherin-mediated cell adhesion. The cell adhesion modulating or concerns are also useful in inhibiting angiogenesis, for enhancing the development of cancer, is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agents are alseful in inhibiting angiogenesis, for enhancing delivery of a tumour in a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for endulating the immune system of a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for modulating panestic stability in a mammal, for modulating energy in a mammal, for modulating synaptic stability in a mammal, for modulating synaptic in a mammal in a mamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cell adhesion-modulating agent; cadherin-mediated cell adhesion; cancer; angiogenesis; central nervous system; wound healing; foreign tissue adhesion; vasopermeability; demyelinating neurological disease; astrocyte; synaptic stability; neurite outgrowth; spinal cord injury; macular degeneration; metastasis; bladder; tumour; ovary; melanoma; carcinoma; leuksemia; multiple sclerosis; cytostatic; antiangiogenic; neuroprotective; ophthalmological; cell adhesion-modulating peptidomimetic;
                                                                                                                       New cell adhesion modulating agent, useful for treating or preventing cancer and/or inhibiting metastasis, inhibiting angiogenesis, enhancing wound healing, treating a demyelinating neurological disease or treating spinal cord injuries.
                                                                                                                                                                                                                                                                                                                    invention relates to a cell adhesion-modulating agent. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidomimetic, comprising a classical cadherin cell adhesion recognition (CAR) sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

```
The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, idinity to modulate classical cadherin-mediated cell adhesion, dentifying a compound that an dential, enhancing the devicery of adhesion, modulating classical cadherin-mediated cell adhesion, modulating classical cadherin-mediated intercellular adhesion, creduting unwanted cellular adhesion, in a mammal, enhancing the devicery of a drug to a tumour in a mammal, inhibiting the development of a cancer in a mammal inhibiting adhesion of foreign tissue implanted within a mammal, contained adhesion of foreign tissue implanted within a mammal, contained and camperation of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability in a mammal and treating metrocytes, contained and central metrocytes in a mammal. The compounds are useful for inhibiting or cenhancing cadherin-mediated cell adhesion. The cell adhesion modulating the cancer, e.g. treating agents are useful for inhibiting metastasis. The cancer is a comman, for enhancing adherin-mediated cell adhesion in a mammal, for enhancing delivery of a drug to a tumour, melanoma, carcinoma or leukaemia. The agents are also useful in inhibiting angiogenesis, for enhancing delivery of a drug to a tumour in a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for enhancing adhesion of foreign tissue implanting a commission in a mammal, for modulating spinal cod injuries in a mammal, for modulating spinal cod injuries in a mammal, for modulating spinal cod injuries in a mammal, for companies and for a capilla adhesion in a mammal, for modulating spinal cod injuries in a mammal, for companies and codenies are also useful in a mammal or a mammal, for modulating spinal cod injuries in a mammal, for modulating spinal codenies are also useful adhesion and mammal and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New cell adhesion modulating agent, useful for treating or preventing cancer and/or inhibiting metastasis, inhibiting angiogenesis, enhancing wound healing, treating a demyelinating neurological disease or treating spinal cord injuries.
                                                                                                                                                                                                                                                                                                                                                   ŝ
                                                                                                                                                                                                                                                                                                                                                   Wang
                                                                                                                                                                                                                                                                                                                                                   Chen Z, Michaud SD,
cadherin cell adhesion recognition sequence; CAR; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 90; 281pp; English.

New cell adhesion modulating agent, useful for treating or preventing cancer and/or inhibiting metastasis, inhibiting angiogenesis, enhancing wound healing, treating a demyelinating neurological disease or treating spinal cord injuries.

Disclosure; SEQ ID NO 84; 281pp; English.

The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, identifying a compound that modulates classical cadherin-mediated cell adhesion, adhesion, modulating classical cadherin-mediated intercellular adhesion, catherin in a mammal, enhancing the delivery of a drug to a tumour in a mammal, inhibiting angiogenesis in a mammal, enhancing delivery of a drug to a tumour in a mammal, enhancing delivery of to the central nervous system of a mammal, enhancing delivery of to the central nervous system of a mammal, increasing vasopermeability in a mammal, treating a demyelinating neurological disease in a mammal, modulating the immune system of a mammal, increasing vasopermeability in a mammal, treating admiration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability in a mammal and treating meuric outgrowth, treating spinal cord injuries in a mammal and treating meuric outgrowth, treating spinal cord injuries in a mammal and treating meuric outgrowth, treating spinal cord injuries in a mammal and treating meuric outgrowth, creating cadherin-mediated cell adhesion. The cell adhesion modulating agents are useful for inhibiting metastasis. The cancer, e.g. treating agents are useful for inhibiting metastasis. The cancer is a contex are also useful in inhibiting angiogenesis, for enhancing the delivery of a drug to a tumour in a mammal, for enhancing within a mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for modulating the immune system of a mammal, for enhancing a mammal, for modulating the immune system of a mammal, for madulating the immune system of a mammal, for modulating the immune system of a demyelinating neurological disease (such as multiple sclerosis) in a mammal, for inhibiting synaptic stability in a mammal, for modulating neurite outgrowth, for treating spinal cord injuries in a mammal and for treating macular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidomimetic, comprising a classical cadherin cell adhesion recognition (CAR) sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV.

The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting angiogenesis, enhancing development of cancer, inhibiting angiogenesis, enhancing development of cancer, inhibiting angiogenesis, enhancing development of cancer, creating demyelinating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating neurite outgrowth, and treating spinal cord injuries and macular neurite coargrowth. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence

The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated intercellular adhesion, reducing unwanted cellular adhesion, enhancing delivery of a drug to a tumor, inhibiting development of cancer, inhibiting anglogenesis, enhancing drug delivery to the CMS, enhancing wound healing, modulating the immune system, increasing vasopermeability, treating demyelinating disease, facilitating migration of an N-cadherin expressing cell on astrocytes, inhibiting synaptic stability, modulating energite outgrowth, and treating spinal cord injuries and macular degeneration. The present sequence represents a cyclic peptide with classical cadherin cell adhesion recognition (CAR) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometrisosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, modulating perideses and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                   ż

                                                                                                                                                                                                              The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprises contacting an endothelial cell with a modulating peptide comprises.

The method is adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                                                                                                                                                                                                                                                                      Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                ပံ

The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadherin-mediated intercellular adhesion, for reducing unwanted cellular adhesion in a mammal, for adhesion, for cancer, for inhibiting angiogenets of cancer, for inhibiting angiogenets of cancer, for inhibiting wound healing, for chancing the adhesion of foreign tissue implanted within a mammal, for cancer in the immune system of a mammal, for increasing wound healing, for condulating the immune system of a mammal, for increasing cancer is a not cancer, for inhibiting synaptic stability, for modulating neurological disease, for for inhibiting synaptic stability, for modulating mecular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia, excessive immune system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and generation of immunoglobuling and diseases associated with excessive generation of T cells. This sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the
                                                                 ovary;
cadherin-mediated intercellular adhesion; tumour; cancer; angiogenesis; central nervous systems; wound healing; vasopermeability; N-cadherin; demyelinating neurological disease; astrocyte; synaptic stability; ovarneurite outgrowth; spinal cord injury; macular degeneration; bladder; melanoma; carcinoma; leukaemia; skin disorder; acute B cell leukaemia; immunoglobulin; T cell generation; CAR; cyclic; ell adhesion recognition sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel cell adhesion modulating agent for modulating cadherin-mediated intercellular adhesion, for enhancing wound healing, has three-dimensional structure similar to three-dimensional structure of cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```

The invention relates to a cell adhesion modulating agent which is a peptidomimetic having a three-dimensional structure of a cyclic peptide that that comprises the sequence HAV within a cyclic peptide ring. The agent is useful for modulating classical cadherin-mediated intercellular adhesion, for reducing unwanted cellular adhesion in a mammal, for enhancing the delivery of a drug to a tumour, for inhibiting the centeral nervous system, for enhancing the adhesion of foreign tissue implanted within a mammal, for modulating the adhesion of foreign tissue implanted within a mammal, for modulating the adhesion of foreign tissue implanted within a mammal, for containing the immune system of a mammal, for increasing wasopermeability, for treating a demyelinating neurological disease, for facilitating migration of an N-cadherin expressing cell on astrocytes, for inhibiting synaptic stability, for modulating neurite outgrowth, for treating spinal cord injuries and for treating macular degeneration. The cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or cancer is a bladder tumour ovarian tumour, melanoma, carcinoma or leukaemia, excessive immunoglobuling and diseases associated with excessive melanoma or and generation of immunoglobuling and diseases associated with excessive generation of T cells. This sequence represents a cadherin (CAD) cell adhesion recognition (CAR) sequence cyclic peptide peptidomimetic of the Novel cell adhesion modulating agent for modulating cadherin-mediated intercellular adhesion, for enhancing wound healing, has threedimensional structure similar to three-dimensional structure of cyclic Disclosure; Page 7; 309pp; English. peptide.

Sequence 7 AA;

The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, identifying a compound that modulates classical cadherin-mediated cell adhesion, modulating classical cadherin-mediated intercellular adhesion, adhesion, modulating classical cadherin-mediated intercellular adhesion, cadhesion, modulating classical cadherin-mediated cell cadherin-mediated cell cadherin-mediated intercellular adhesion, correcting unwanted cellular adhesion in a mammal, enhancing adhesion of a mammal, enhancing adhesion of foreign tissue implanted within a mammal, cort cort cortical cadhering admension of a mammal, increasing vasopermeability in a mammal, treating a demyelinating neurological disease in a mammal, contintitity in a mammal, modulating synaptic stability in a mammal, modulating meurite outgrowth, creating spinal cord injuries in a mammal and treating macular contintities in a mammal and treating macular cenhancing cadherin-mediated cell adhesion. The call adhesion modulating agents are useful for inhibiting the development of cancer, e.g. treating agents are useful for inhibiting the development of cancer, e.g. treating cort preventing cancer and/or inhibiting metastasis. The cancer is a

bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agents are also useful in inhibiting anglogenesis, for enhancing the delivery of a drug to a tumour in a mammal, for enhancing drug delivery to the central nervous system of a mammal, for enhancing wound healing in a mammal, for modulating the immune system of a mammal, for treating a demyelinating neurological disease (such as multiple solerosis) in a mammal, for inhibiting synaptic stability in a mammal, for modulating neurological disease (such as multiple solerosis) in a neurite outgrowth, for treating spinal cord injuries in a mammal and for treating amoular degeneration in a mammal. This sequence represents a cadherin-mediated cell adhesion-modulating peptidonimetic, comprising a classical cadherin cell adhesion recognition (CAR) sequence.
                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cell adhesion-modulating agent; cadherin-mediated cell adhesion; cancer; angiogenesis; central nervous system; wound healing; foreign tissue adhesion; vacopermeability; demyelinating neurological disease; astrocyte; synaptic stability; neurite outgrowth; spinal cord injury; macular degeneration; metastasis; bladder; tumour; ovary; melanoma; carcinoma; leukaemia; multiple sclerosis; cytostatic; antiangiogenic; neuroprotective; ophthalmological; Cell adhesion-modulating peptidomimetic; cadherin cell adhesion recognition sequence; CAR; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cell adhesion modulating agent, useful for treating or preventing cancer and/or inhibiting metastasis, inhibiting angiogenesis, enhancing wound healing, treating a demyelinating neurological disease or treating spinal cord injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a cell adhesion-modulating agent. The invention also relates to methods for screening a candidate compound for the ability to modulate classical cadherin-mediated cell adhesion, identifying a compound that modulates classical cadherin-mediated cell

to the central nervous system of a mammal, enhancing who welver the central nervous system of a mammal, enhancing adhesion of foreign tissue implanted within a mammal, enhancing adhesion of foreign tissue implanted within a mammal, amodulating the immune system of a mammal, increasing vasopermeability in a mammal, increasing vasopermeability in a mammal, increasing vasopermeability in a mammal, modulating enlar of activities in a mammal, modulating macular creating spinal cord injuries in a mammal and treating macular creating spinal cord injuries in a mammal and treating macular creating spinal cord injuries in a mammal and treating macular creating selected for inhibiting the development of cancer, e.g. treating or enhancing cancer and/or inhibiting metastasis. The cancer is a correst cancer is a bladder tumour, ovarian tumour, melanoma, carcinoma or leukaemia. The agents are also useful in inhibiting anglogenesis, for enhancing delivery cto the central nervous system of a mammal, for enhancing daily and mammal, for enhancing adhesion of foreign tissue implanted within a mammal, for enhancing adhesion of foreign tissue implanted within a cammmal, for inhibiting synaptic stability in a mammal, for modulating or treating macular degenerating spinal cord injuries in a mammal or treating macular degeneration in a mammal. This sequence represents a cacherin-mediated cell adhesion-modulating peptidomimetic, comprising a cacherin-mediated cell adhesion recognition (CAR) sequence.

the Kunitz protease inhibitors (RPI) domain of the amyloid precursor the Kunitz protease inhibitors can be used used to treat or prevent corporters associated with increased activity of serine proteases inhibitors can be used used to treat or prevent disorders associated with increased activity of serine proteases.

Co bypass surgery where plasma proteases are activated by contact with surfaces in the heart-lung machine), but also other conditions such as pancreatitis; deep vein thrombosis; rheumatoid arthritis; psoriasis; myocardial infarction; and transplant rejection. They are also for organ preservation and to promote wound healing. In vitro the protease cinhibitors may be used to inhibit serine proteases during preparation of cell extracts. The protease inhibitors are based on a human peptide sequence so are unlikely to be immunogenic, can be produced at high levels in recombinant expression systems, and can inhibit a wide range of serine proteases. They are more potent or specific than known inhibitors. The present sequence represents a KPI variant which is given in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes protease inhibitors that are analogues of the Kunitz protease inhibitor (KPI) domain of the amyloid precursor protein. The protease inhibitors can be used used to treat or prevent disorders associated with increased activity of serine proteases, specifically blood loss during surgery (particularly cardiopulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel enzyme inhibitors especially used to reduce postoperative bleeding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                               The present invention relates to a method for modulating endothelial cell adhesion. The method comprises contacting an endothelial cell with a modulating peptide comprising a cadherin cell adhesion recognition sequence (His Ala Val) within a cyclic peptide ring. The method is useful for inhibiting angiogenesis, increasing vasopermeability, increasing blood flow to a tumour, disrupting neovasculature and inhibiting the development of endometriosis in a mammal. The modulating peptide reduces unwanted endothelial adhesion occurring between tumour cells, tumour cells and normal cells, normal cells as a result of surgery, injury, chemotherapy, disease and inflammation. The present sequence is one such
                                                                          Modulating endothelial cell adhesion for inhibiting development of endometriosis, increasing blood flow to tumor in a mammal, by contacting cell with a cyclic peptide having cadherin cell adhesion recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel enzyme inhibitors especially used to reduce postoperative bleeding.

          durfaces in the heart-lung machine), but also other conditions such as pancreatitis; deep vain thrombosis; rheumatoid arthritis; psoriasis; myocardial infarction; and transplant rejection. They are also for organ preservation and to promote wound healing. In vitro the protease inhibitors are based on a human peptide cell extracts. The protease inhibitors are based on a human peptide sequence so are unlikely to be immunogenic, can be produced at high serine proteases. They are more potent or specific than known inhibitors. The present series proteases in they are more potent or specific than known inhibitors. The present sequence to present a kPI variant which is given in an example from the present invention

The invention relates to novel isolated human secreted polypeptides (I) and (II) are useful for treating conditions such as arthritis, nephritis, Crohn's disease, inflammatory conditions such as arthritis, nephritis, Crohn's disease, inflammatory conditions such as arthritis, nephritis, Crohn's disease, and is increasing haematopolesis, stem cell survival, bone growth corphylaxis or treatment of one or more cancers (II) is also useful for prophylaxis or treatment of one or more cancers (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides.

(I) induces the proliferation of neural cells and respensention of nerve and brain tissue and is useful for the treatment of central and parintens disease, Huntington's disease, and amyoricophic lateral and parintens disease, Huntington's disease, and amyoricophic lateral and activity, regulation of haematopolesis and is useful for treatment of central and cretivity, regulation of haematopolesis and is useful for treating myeloid or lignorates, placelet disorders activity alsorders, placelet disorders activity and cell disorders, placelet disorders activity and or bone, cartilage, tendon, lignment and/or nerve tissue growth and in tissue repair, healing of burns, incisions, ulcerangement of lung or liver fibrosis, or periodontal disease. Furthermore, (I) is also useful for gut procedion or regeneration and treatment of lung or liver fibrosis, creperfusion injury in various famunodeficiency (SCID), bacterial or the disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerossis, in addition, (I) affects blorbythms or circadian cycles of rhythms.

Creperfuse including severe combined immunodeficiency (SCID), bacterial or fundations, autoimmune disorders e.g. multiple sclerossis, in an antigence effects or other pale relations or circadian cycles of rhythms.

Creperfusers including severe co

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA aequences (ABL16175) and the encoded proteins (ABB573737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid molecule (I) encoding a Can 1 polypeptide. The Can 1 nucleic acid molecule is used to diagnose or treat infertility or premature ovarian failure or Sertoli Cell only syndrome in a mammal. The present sequence is that of the Drosophila melanogaster Can 1 protein of the invention. Note: The present sequence is not given in the printed specification but was obtained through the GenBank reference
                                                                                                                                                                                                                                                                                                                                            nucleic acid molecule (I) encoding a Can 1 polypeptide used in treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

New immunoadhesin, useful for treating anthrax and rhinovirus, comprises chimeric toxin receptor protein linked to immunoglobulin heavy chain, and J chain and secretory component associated with the chimeric toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel immunoadhesin comprising a chimeric toxin receptor protein linked to at least a portion of an immunoadhesin heavy chain with a J (joining) chain and secretory component (SC) associated with the chimeric toxin receptor protein. The immunoadhesin comprises a chimeric bacterial or viral toxin receptor protein and the immunoadhesin has plant-specific glycosylation. The immunoadhesin of the invention demonstrates virucide and antibacterial activities and may be useful for reducing the binding of a viral or bacterial antigen to a host call and thus for treating or preventing anthrax, as well as human rhinovirus infection which results in the common cold. The current sequence is that of the porcine immunoadhesion-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Non-naturally occurring peptide; anion pump protein; tuberculosis; hypersensitivity reaction; tuberculostatic.

                                                                                                                                                                                                                           Mycobacterium tuberculosis comprising an amino acid sequence
Corresponding to an anion pump protein. The invention also relates to a
Corresponding to an anion pump protein. The invention also relates to a
Corresponding to an anion pump protein. The invention also relates to a
Corresponding to an anion pump protein. The invention also relates to a
Corresponding to acid corresponding to a DNA sequence of
Mycobacterium tuberculosis or Mycobacterium leprae. The new peptide is
Carioved from the sequence of the invention may elicit a specific immune
Corresponse. The peptide may also be used to detect hypersensitivity
Coractions of individuals exposed to Mycobacterium tuberculosis or
Mycobacterium leprae. The proteins and peptides may be affixed to solid
Cupponts to detect antibodies typical of hypersensitivity reactions, from
Corporation of individual peptide of the invention. Note: The sequence data for
Corporating peptide of the invention. Note: The sequence data for
Chis patent did not form part of the printed specification but was
Corporating electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant cancer-associated genes, such as KCNJ9, useful for diagnosing or treating carcinoma, e.g. breast, colon, rectal, pancreatic, cervical, or skin cancers, lymphomas, or leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer-associated gene; CA gene; cancer; carcinoma; lymphoma; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the spreamce or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The
                                                                  The invention comprises then amino acid and coding sequences of cancerassociated (CA) genes isolated from Nanoarchaeum equitans. The invention also comprises the Nanoarchaeum equitans genome. The DNA and protein sequences of the invention are useful for diagnosing and treating cancer (e.g. carcinoma, lymphoma, or leukaemia). The present amino acid sequence represents a Nanoarchaeum equitans CA protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to polynucleotide of the invention antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide; a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Propionibacterium acnes polypeptides and polymucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downrequiate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences

patient. The P. acnes polypeptides, polynuclectides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for disgnosaing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynuclectides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a disgnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

The present sequence is parvovirus non-structure protein 1 (NSI) variant (T463A). The invention relates to the variants of the parvovirus nonstructure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is parvovirus non-structure protein 1 (NSI) variant (T1994A). The invention relates to the variants of the parvovirus non-structure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

The present sequence is a parvovirus wild-type non-structure protein 1 (NS1). The present invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is parvovirus non-structure protein 1 (NSI) variant (S283A). The invention relates to the variants of the parvovirus non-structure protein (NSI) having a shifted equilibrium between the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is parvovirus non-structure protein 1 (NSI) variant (T363A). The invention relates to the variants of the parvovirus nonstructure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotxcicty activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                        Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                    Peptide #2246 encoded by probe for measuring cervical gene expression.
                                                                                                                                                      human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide #2315 encoded by human foetal liver single exon probe.

                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the human Colorectal Lesion Associated 2 (CLA2) gene (1; ADO34038), which is located on chromosome 5p14. CLA2 dequences are useful for the detection and treatment of proliferative disorders such as: a benign and malignant tumour (head, neck, respiratory tract, gastrointestinal tract, skin and its appendages, central and peripheral nervous system, arinary system, reproductive system, endocrine system, soft tissues and bone, lymphopoietic and haematopoietic system, breast, anogenital or colorectal cancers), a carcinoma or a dysplasia. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           isolated colorectal lesion associated nucleic acid molecule useful in detection and therapy of proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytostatic; human; Colorectal Lesion Associated 2; CLA2; chromosome Sp14; proliferative disorder; tumour; cancer; carcinoma; dysplasia.
replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                            Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide #2359 encoded by probe for measuring placental gene expression.

                                                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes (SENP: see AAI3115-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; microarray; single exon probe; gene expression; breast; disease;

increate acts proces to measuring years explained and a sample using the probes with a collection of detectably labelled nucleic acids derived probes with a collection of detectably labelled nucleic acids derived from manyly of human breast, and then measuring the label bound to each probe of the microarray. The probes useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring microarrays. The method is suitable for rapid sequence tag microarrays. The method is suitable for rapid sequence is a peptide nocoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO tells. It is the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein #2224 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Single exon nucleic acid probes for analyzing gene expression in human
sample derived
                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                      ö

probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, disgnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format disectly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genome-derived single exon nucleic acid probes useful for analyzing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzhaimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                         The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fib. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                 Novel single exon nucleic acid probe used to measuring gene expression in a human breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human peptide encoded by genome-derived single exon probe SEQ ID 27193.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromacrosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary hatclocytosis; lymphangiolejomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary cillary dyskinesis; pulmonary hypertension; hyaline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Complements relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of the first nucleic acid sequences mentioned in the specification, or their complements or the 1239 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic cid expressed in the human lung; measuring gene expression in a sample cit the novel set of probes which hybridise acids derived from human lung; omprising on contacting the array with a sample collection of detectably labeled nucleic acids derived from human lung comprising of a collection of detectably labeled nucleic acids derived from human lung array; identifying at least one exon from genomic sequences of the eukaryote; and (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting a predicting a predicting at least one comprising (a) array; identifying a fragment identical to the predicted exon, the probe; is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and/or cell types using hybridisation to a single exon in several tissues and/or cell types using hybridisation to a single exon for comprising one the exons should be assigned to a single gene; a peptide comprising one comprising of the exons should be assigned to a single gene; a peptide comprising compression of the exons multioned in the specification, or encoded by the corposycen manybais, and for identifying exons in a gene particularly warm and for identifying exons in a gene particularly using human analysis, and for identifying exons in a gene particularly using human analysis, and for identifying exons in a gene particularly using human analysis, and for identifying exons in the probes particularly are publicated mRNA and for the study of lung d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present sequence is a peptide/protein encoded by a single exon probe of
the invention. Note: The sequence data for this patent did not form part
of the printed specification, but was obtained in electronic format
                                                                              Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gape
                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set of single exon

in the specification) describes subscultanty putnitude interest to as open reading frame. ORFX, where X is 1-11491 (see Table In the specification). ABN15762 to ABN27252 encode the human ORFX proteins are useful for reating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disorders infectious transplantation, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune inflammatory eve disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, ulcers, myasthenia gravis, graft-versus-host contection or regeneration and treatment of lung or liver fibrosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from reperfusion injury in various tissues and conditions resulting from reperfusion injury in various tissues and conditions resulting from reperfusion injury in various, but was obtained in electronic form part of the princed specification, but was obtained in electronic form at directly from WIPO at ftp.wipo.int/published_pct_sequences
                                                                                                                                                                                                                                      Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypethyoidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention describes substantially purified human proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autolmmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 15026; 1037pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and partners are useful in medical imaging of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostic responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and can sequences. ABG00010-ABG30377 represent novel human diagnostic mino acid sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
